

836 7714 - 863 5584 HDBaseT Installation Cable Pro. special length

General description of the devices with basic functions

HDBaseT technology is a complex technology to transmit HDMI, Audio, RS232, IR and power supply over one CAT cable up to 100 m or 70 m. The technology is HDCP compliant and transports video up to 4K.

This technology depends on a high level of all installed components in the AV installation, like cables, connectors and electronic devices. All components must be with the highest quality. So it is very important to reduce loss on every connector, socket and extension cable.

Further the quality and the design of HDBaseT cable is specified by the HDBaseT group to fulfill the high standard of HDBaseT. So the cable must be AWG24/1 to fulfill the requirements.

All of our HDBaseT components fulfill the high standards and guarantee best results in every AV installation.

Installation and operating voltage

Installation is made easy with HDBaseT Installation cable Pro, because a wide range of definite length are available from stock. Also bulkware is available, so that every demand during installation can be fulfilled. With the Professional RJ45 plugs for in-field-assembly it is very easy to prepare every cable length you need during installation within some minutes.

General

The HDBaseT Installation Cable Pro is constructed with cables and plugs of newest technological standard. The cables are designed for HDBaseT usage and fulfill all the requirements for installation in buildings. They guarantee the maximum length of transmission with HDBaseT.
